## **FISCAL ANALYSIS**

---

### **ASSUMPTION**

Officials from the **St. Louis County, Jackson County, St. Charles County, Greene County, Boone County, City of Jefferson City, and the City of Independence** did not respond to our fiscal impact request.

Officials from the **Central Missouri State University, Truman State University, Office of the State Courts Administrator, Departments of Conservation, Transportation, Labor and Industrial Relations, and the Office of Administration - Divisions of General Services and Personnel** assume the proposed legislation would have no fiscal impact on their agencies.

Officials from the **University of Missouri** assume the proposal would positively impact the University although an exact fiscal impact is difficult to measure.

Officials from the **Southwest Missouri State University (SMS)** defer to the Office of Administration for the fiscal impact of this proposal as the SMS's Workers' Compensation program is administered by the Office of Administration's Central Accident Reporting Office.

Officials from the **City of Springfield (COS)** assume the proposal would not affect revenues, costs, or losses. COS assumes the proposal would result in savings although they do not have the data to accurately project the amount of savings. COS notes, for particular cases, the savings could be substantial.

Officials from the **City of St. Louis (STL)** assume the proposal could potentially reduce Workers' Compensation costs in certain instances, resulting in a positive fiscal impact. STL notes the amount of potential savings cannot be estimated.

**Oversight** inquired of the **Office of Administration - Division of General Services, Risk Management (COA)** and found for FY 2001, there were 4,829 reported injuries to the Central Accident Reporting (CARO) program, with claims of \$14,503,230, for an average cost per claim of \$3,003. Oversight inquired of the **Department of Transportation (DHT)** and found DHT tests approximately six percent of Workers' Compensation claims for controlled substances and less than one percent test positive.

**Oversight** applied DHT's figures to claims paid out of the CARO program for FY 2001. In FY 2001, there were 4,829 reported injuries with an average cost per claim of \$3,003. Assuming six percent of claimants (290) were drug or alcohol tested and one percent tested positive, the savings to the state, as a result of not paying benefits, would be \$8,709.

ASSUMPTION (continued)

**Oversight** further inquired of the **Highway Patrol (MSHP)** and found for calendar year 2001, the average cost per Workers' Compensation claim was \$8,752. MSHP ran three tests for intoxication and none were positive.

**Oversight** notes the proposal does not mandate controlled substance testing after an accident and therefore assumes no costs would be associated with passage of the proposal. The potential for cost savings would depend on the number of positive drug or alcohol tests and the amount of any claim that would be denied resulting from a positive test. **Oversight** assumes any savings resulting from passage of the proposal would be the difference between the 15% reduction and the 100% reduction, per claim, and has ranged the amount from \$0 to less than \$100,000.

### FISCAL IMPACT - Small Business

Small businesses may recognize a savings in the amount Workers' Compensation benefits paid as a result of passage of this proposal.

### DESCRIPTION

Under current law, workers' compensation and death benefits are reduced 15% if the employee's injury was sustained in conjunction with the use of alcohol or drugs. This proposal eliminates benefits entirely if the employee's injury was sustained in conjunction with the use of alcohol or drugs.

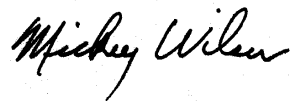

This legislation is not federally mandated, would not duplicate any other program and would not require additional capital improvements or rental space.
